# Station 1- Enzymes

- Label the terms on the diagram on your handout:
  - Enzyme
  - Substrate
  - Active Site
  - Enzyme substrate complex
  - Products
- Label the diagrams below as either competitive or non-competitive inhibition. How are these two processes different?

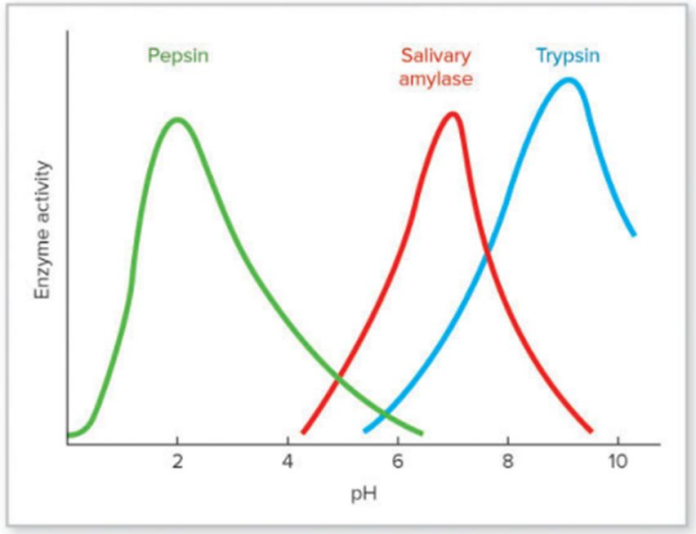

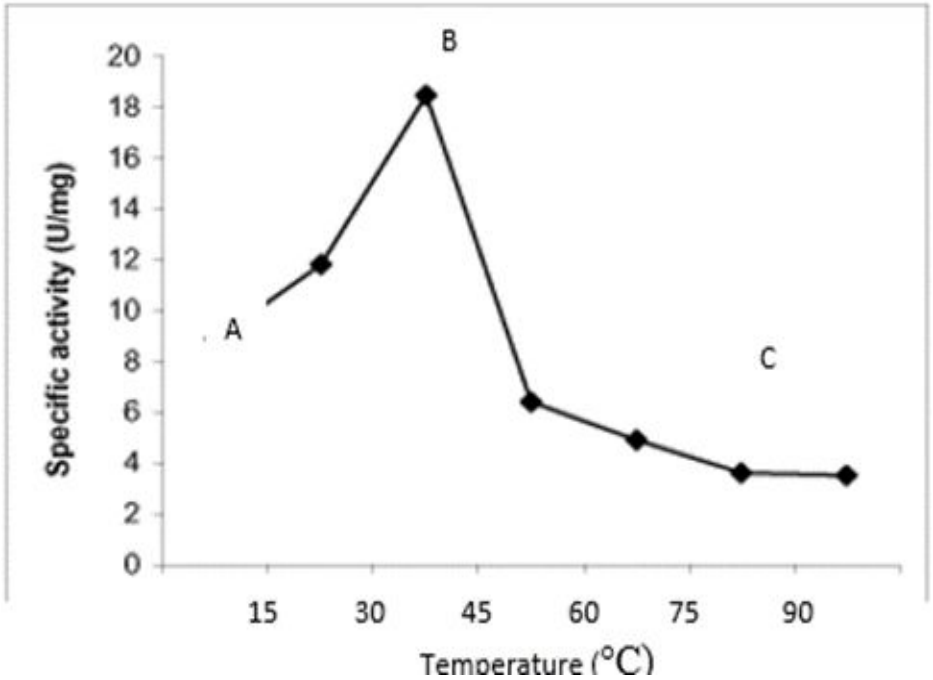

# Station 1 Cont.- Enzymes

Answer the questions related to the graphs below on your handout.

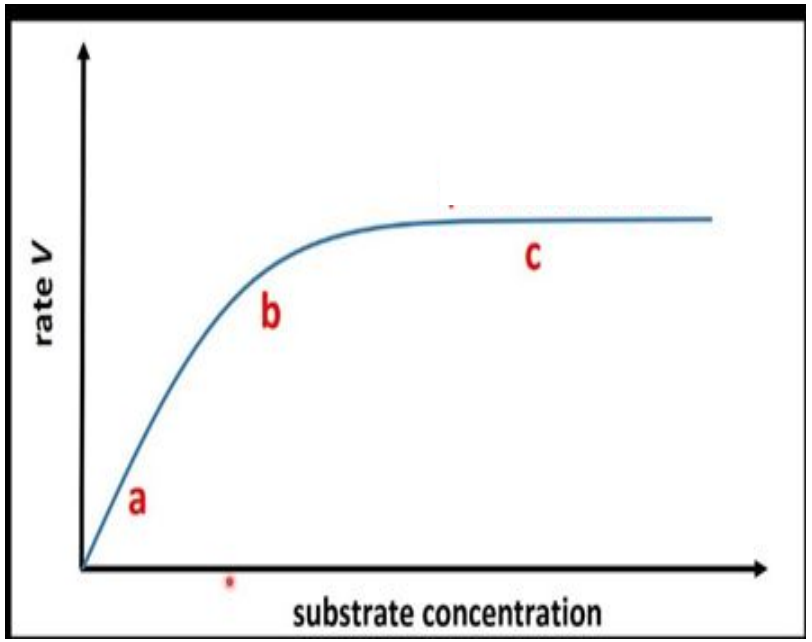

## Graph A

## Graph B

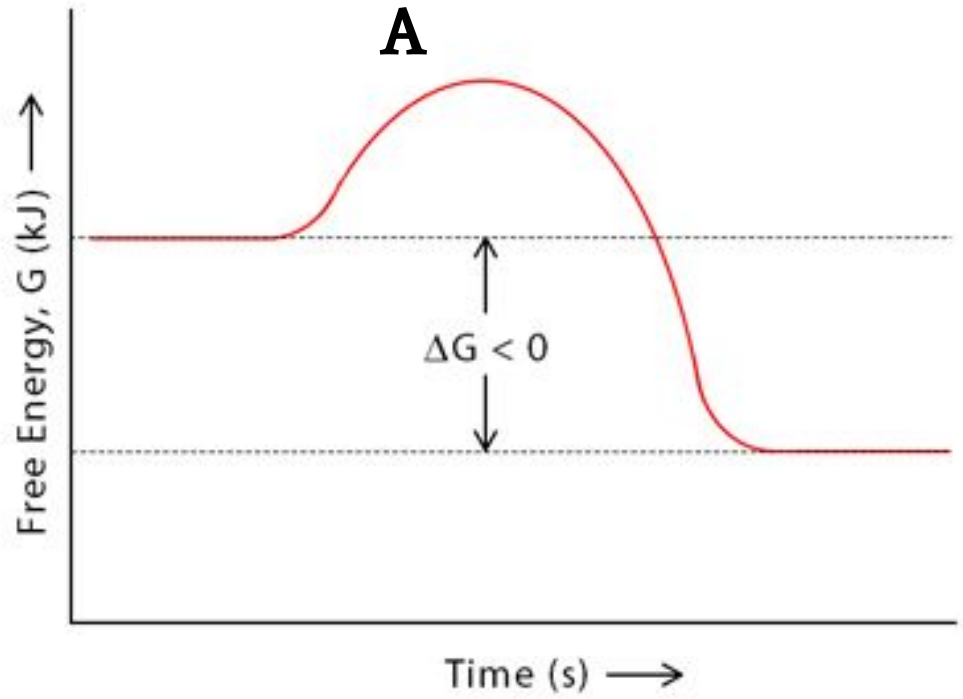

## Graph C

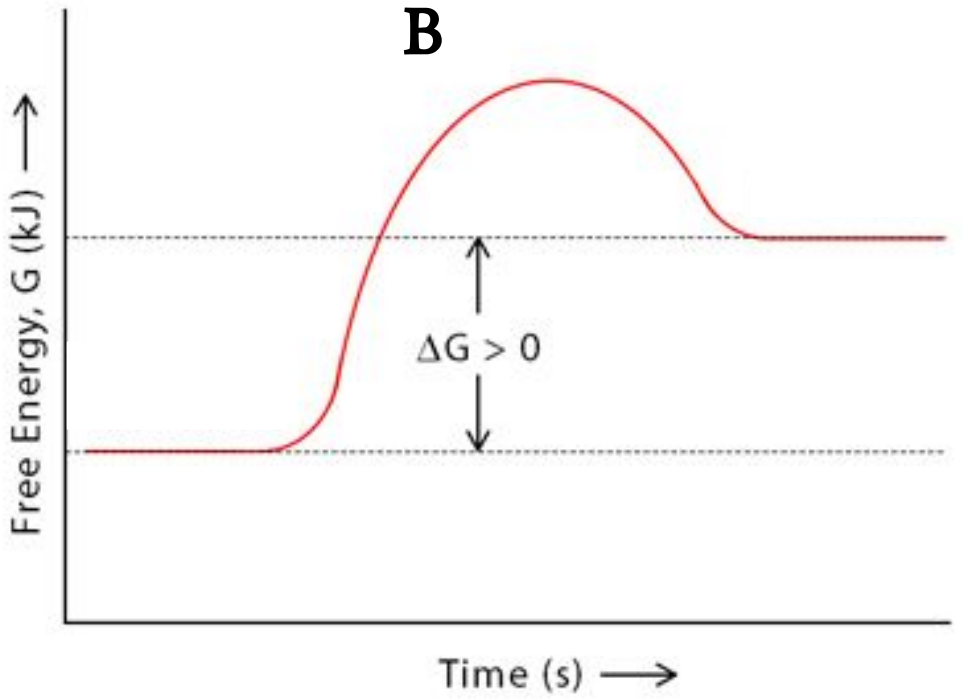

# Station 2-Energy

Label the parts of the graphs below with **reactants** , **products** , and **where energy is either being released or added** . Indicate if the graph represents an **endergonic** or **exergonic** reaction.

**Graph A**

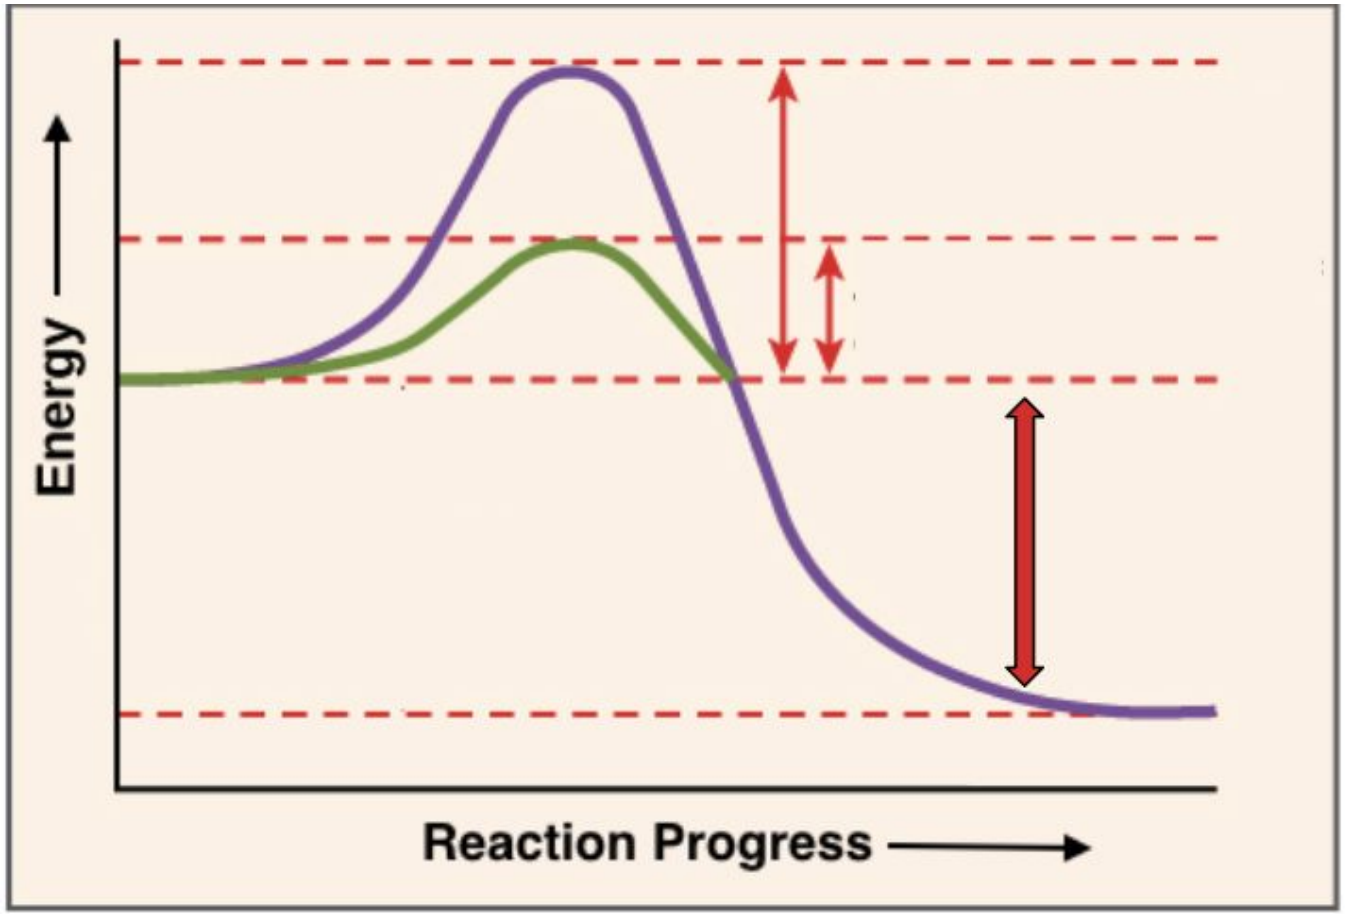

**Graph B**

# Station 2 Energy Cont.

Label the enzyme graph with the following:

- Reaction with the enzyme
- Reaction without the enzyme
- overall energy released
- reactants
- products
- activation energy with the enzyme
- activation energy without the enzyme

How do enzymes speed up the rate of chemical reactions?

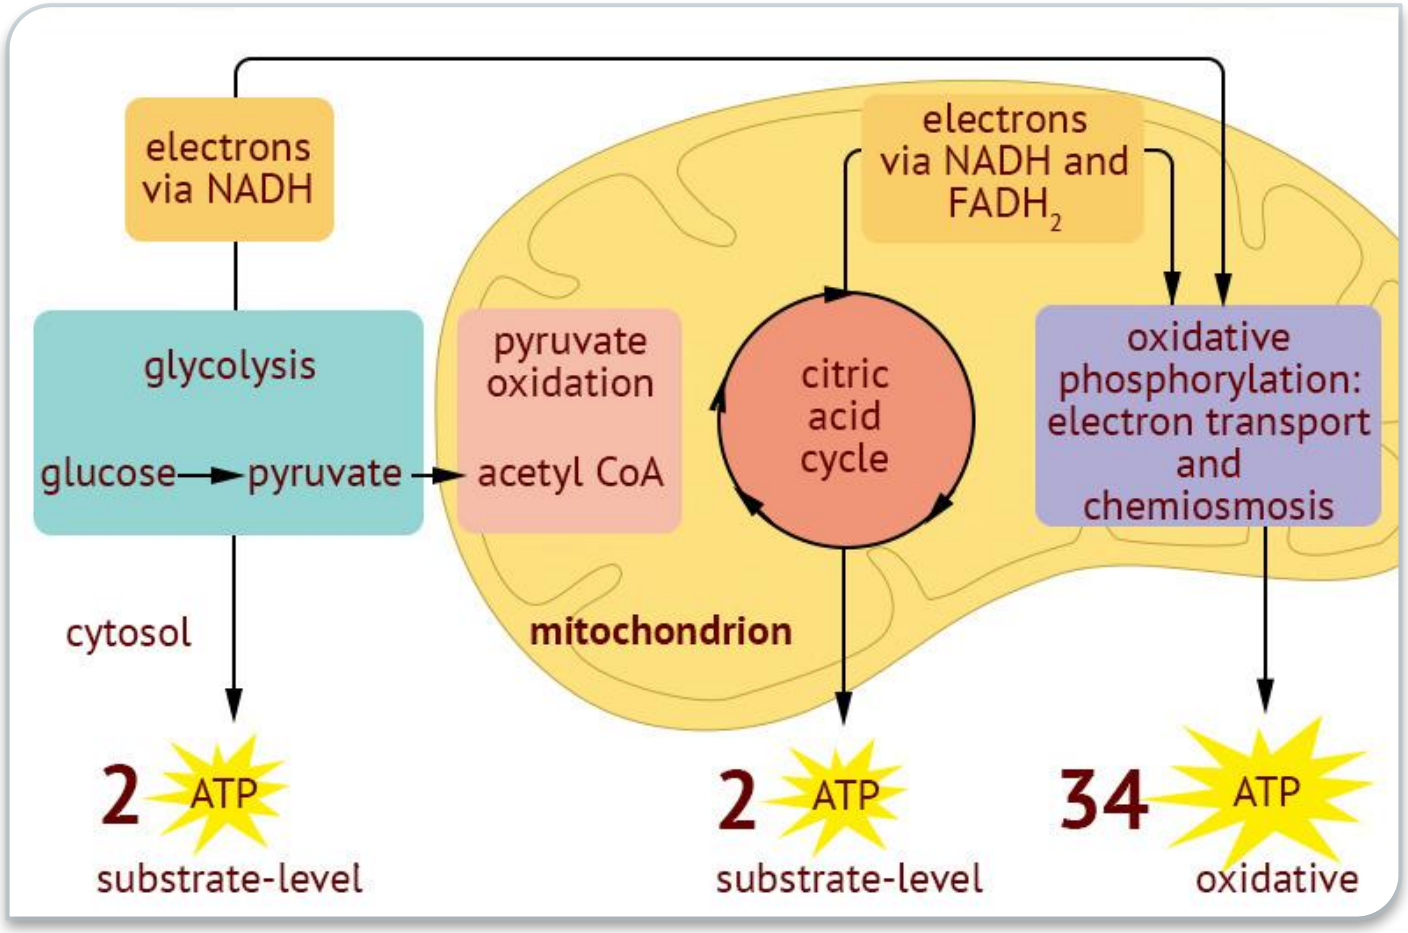

# Station 3- Relating Cellular Respiration and Photosynthesis

Fill in the chart below in your handout. How are cellular respiration and photosynthesis related processes?

| | Cellular Respiration | Photosynthesis |
|---|---|---|
| Role of Oxygen? | | |
| Role of CO2? | | |
| Role of Glucose? | | |
| Role of Water? | | |
| Role of ATP? | | |
| WHO does it? | | |
| WHERE does it occur in the cell? | | |
| WHY does it occur? | | |

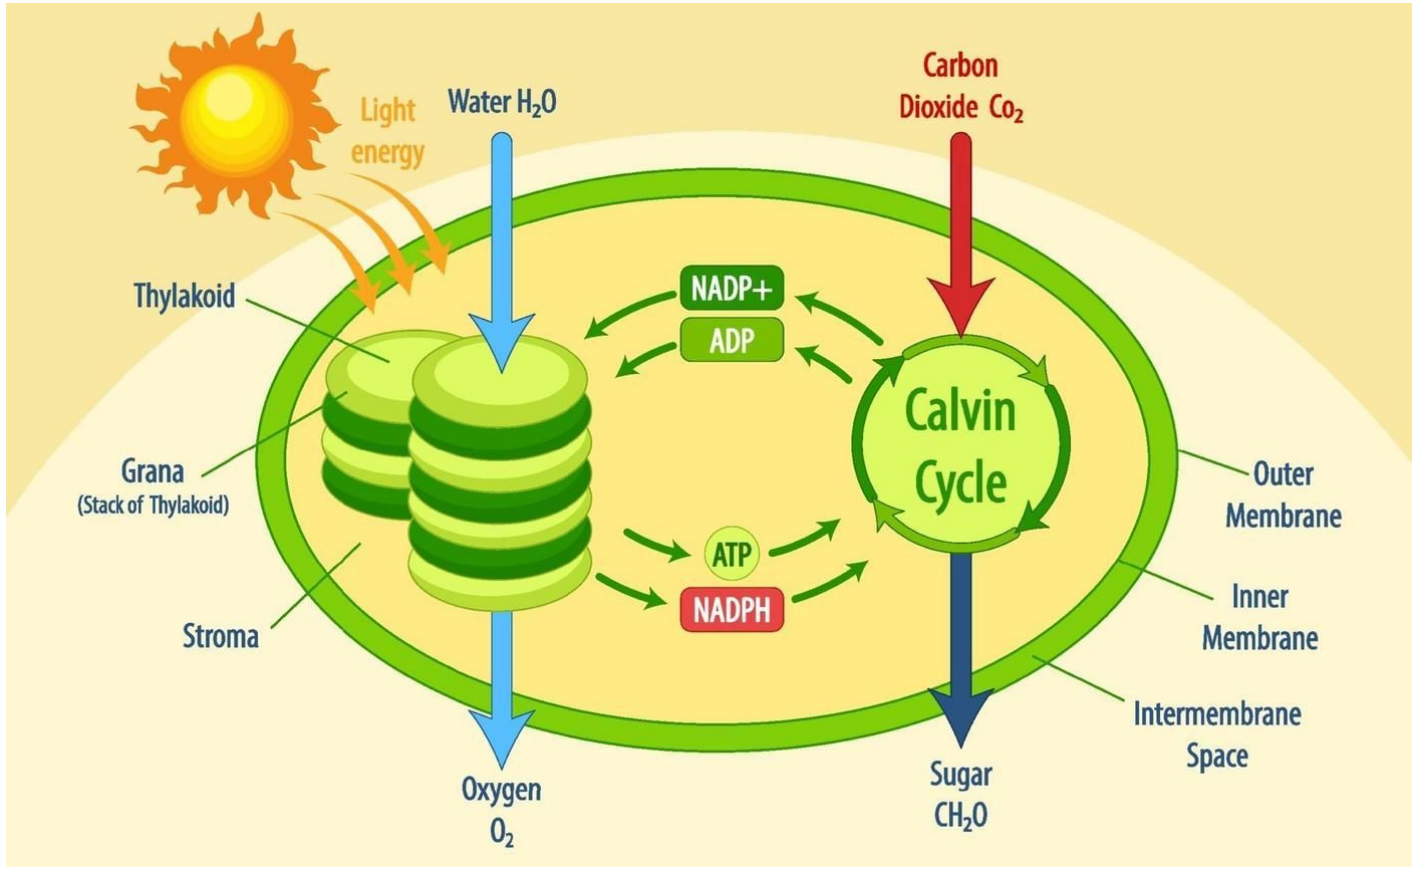

# Station 4- Cellular Respiration

Complete the graphic organizer in your handout summarizing the steps to cellular respiration. Answer the questions that follow.

# Station 5- Photosynthesis

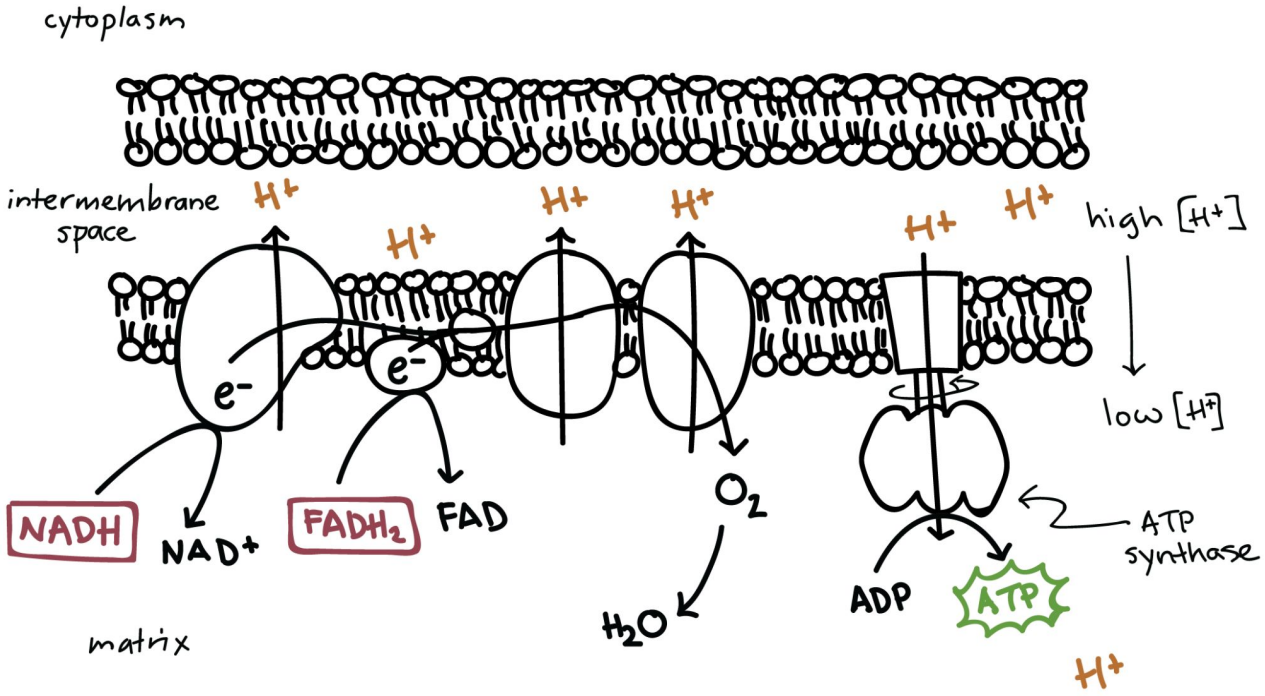

Complete the graphic organizer in your handout summarizing the steps to photosynthesis. Answer the questions that follow.

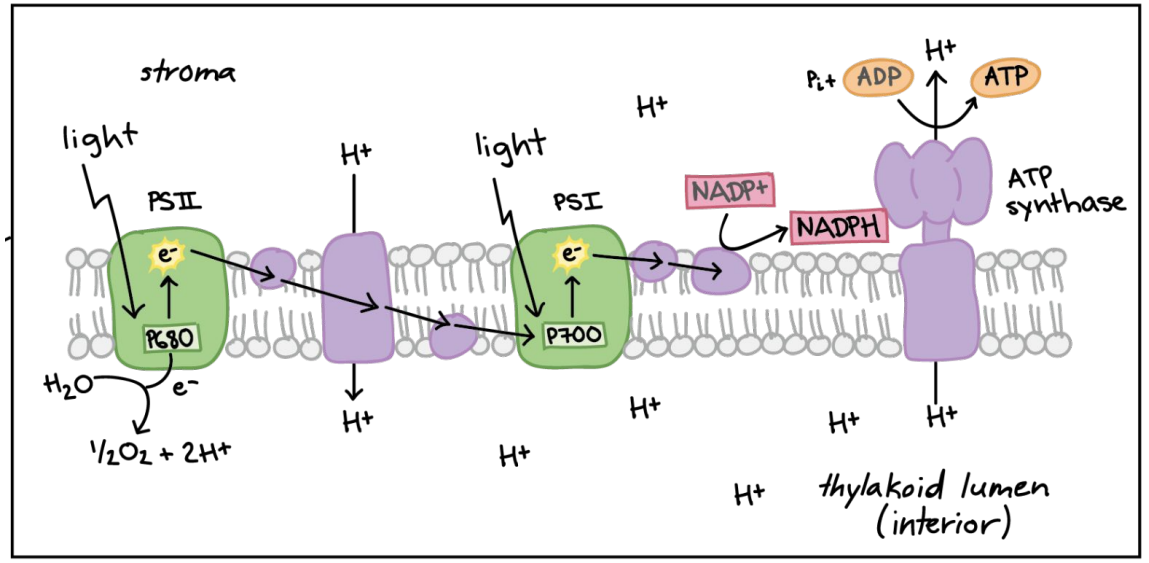

# Station 6 -The ETC

Label the diagrams of the ETC in your handout.

## ETC- Cellular Respiration

## ETC- Photosynthesis

# Station 6 Cont.-The ETC

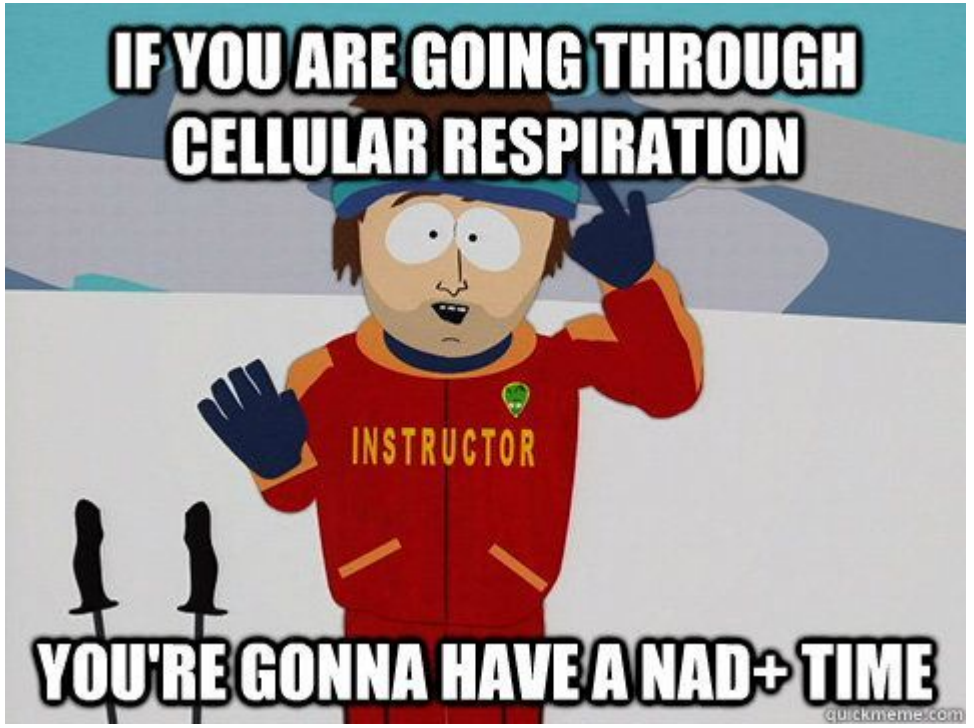

Complete the chart below summarizing the differences between the ETC in photosynthesis and cellular respiration.

| | Cellular Respiration | Photosynthesis |
|---|---|---|
| What is the purpose of the ETC? | | |
| Who are the electron carriers? | | |
| Where is the ETC located? | | |
| What supplies energy for the ETC? | | |

# Station 7- CR Practice Questions

Complete the cellular respiration practice multiple choice questions in your packet. See your teacher for the answer key when you finish.

# Station 8- PS Practice Questions

Complete the photosynthesis practice multiple choice questions in your packet. See your teacher for the answer key when you finish.
